Get your city ready for decarbonising its heating and cooling system!

Integrated tool for empowering public authorities in the development of sustainable plans for low carbon heating and cooling

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 723757.

PLANHEAT

Heating and cooling accounts for 50% of the EU’s energy consumption. No energy transition can take place without decarbonising the heating and cooling system. District energy delivers sustainable heating and cooling, connecting local, renewable and low-carbon energy sources to local needs.

Imagine a city that is smart, competitive, livable and green.

If you want this to be your city, PLANHEAT can help you!

PLANHEAT will develop a tool so that your city can map, plan and simulate low-carbon, economically viable scenarios for heating and cooling systems, tailored to your local conditions.

Validation cities  PLANHEAT will validate its integrated and easy-to-use tool in three cities:

**ANTWERP / BELGIUM**

**LECCE / ITALY**

**VELIKA GORICA / CROATIA**

The PLANHEAT tool will support local authorities in:

- Mapping – planning – simulating the local energy demand and supply
- Showing possible future scenarios
- Understanding and comparing these new scenarios
- Identifying potentials for the existing network
- Telling you the energetic, economic and environmental gains!

The PLANHEAT tool will be:

- EASY-TO-USE
- OPEN-SOURCE
- FREE

Are YOU ready for this change?

PLANHEAT intends to actively involve 50 EU cities in the project.

We offer:

- In-depth involvement of all PLANHEAT cities: shape and improve the tool
- Dedicated trainings and workshops
- Webinars throughout the whole project
- Events at local and EU-level
- Guidelines and How-To-Tutorials
- Sharing expertise and experiences

Are you a municipality or local authority and would like to get involved? Let PLANHEAT support you!
